

IOT HVAC CONTROLS

The IOT Thermostat provides the most powerful and flexible system for HVAC controls in commercial and multi-family facilities. Our thermostat provides powerful ecosystem which allows deployment to any size facility and any number of properties in a portfolio. Multiple connectivity options allows the thermostat to be used stand-alone or as a compliment to any existing building automation system. Whether garden style or brownstones with individual tenant HVAC units, or mid-rise and high-rise properties with central plant operations, our thermostat and its platform solution provides an incredible mixture of elegance, flexibility, power, and simplicity.

- Easy Retrofits
- Simple Scheduling
- Setpoint Restrictions
- Global Access
- Commercial Lockouts
- Interoperable
