IoT Ready DALI Lighting Controls

Dali 2 is innovative and latest LMS Control technology for the IoT era, it meets all of today's requirement for professional and efficient lighting management. Dali enables the control of robust, scalable and flexible lighting networks as well as uses intelligent dimming methods to reduce electricity cost and carbon emission.

The digital nature of Dali allows two-way communication between devices, so a device can report a failure, or answer a query about its status or any information. Wiring is relatively simple; Dali power and data is carried by the same pair of wires, without the need for a separate bus cable.
